Appendix

GRS Laboratories examined a 19.47 ct natural sapphire, described in report number GRS2025-010017, that demonstrates very good characteristics worthy of a dedicated mention.

This important sapphire is distinguished by a very rare combination of size, a fine vivid blue color variety (GRS-type  royal blue), very good brilliance and transparency.

Analytical and advanced testing traces the origin of this gemstone to the legendary and historical mines of Sri Lanka (Ceylon), the mining area known for having produced some of the largest and most significant sapphires. The fascinating internal world of Sri Lankan sapphire inclusions can be witnessed in this particular gemstone and represents a classic landmark example of the paradise island of gems. At the time of testing, it was concluded that the gemstone was spared from thermal enhancement.

The combination of very good attributes that this sapphire displays was concluded to be important. The vivid blue color radiates harmoniously in tone and color saturation. A high degree of lapidary craftsmanship adds value to the nature of this gemstone.

Untreated sapphires of such size and high quality are very rare.

Dr. A. Peretti
